Dear Louis and Kerry,

Herewith a short update / testimonial on your FireBlock fire retardant product, so graciously donated to our NPO for the use during our Community Emergency Response Service activities throughout Brakpan, Ekurhuleni, Gauteng, South Africa.

We received a call on 13 November 2022 at 03:05 am, for a truck on fire on the N17 highway, near Carnival City, in Brakpan.

A light motor vehicle had driven into the rear of the truck. On arrival it was found that both the vehicle and the truck rear, were fully engulfed in flames. We successfully extinguished both the vehicle and truck rear with our 650-liter trailer unit containing the game changer FireBlock. We applied the product with the High-Pressure unit, as well as the volume unit.

We used a two-pronged attack, and it turned out that the fire was no match on the applied methodology.

Re-ignition was virtually impossible as we experienced a quick flame knock out with a 'rapid', almost instantaneous cooling of the area where the product was sprayed.

Even though the vehicle body was quite mangled, the product managed to penetrate though all the cracks and crevices.

We noticed that the 'extinguishing time' of the fire was cut short and water availability extended due to us not having to use copious amounts of water as would have been the case without FireBlock.

We currently have the product in 3 x separate units. The portable fire extinguishers with its special +long reach nozzles (extremely effective), the fire knapsack / backpack with pre-dissolved product (as a non-pressurised on-demand pump action system) and in our 650-liter bakkie-sakkie "trailer" unit, in a pre-dissolved liquid (ready for application) state.

In all my years of actively being engaged with fires, I have not come across a product that delivers what it promises, unlike yours.

We found that the correct mixing ratio is key in successfully applying the product; based on the pH of our locally sourced water.
